

BUILD WITH A STRATEGIC EDGE

MYCON Congratulates Encore Wire on Achieving LEED Platinum Certification

MYCON General Contractors would like to congratulate our client, Encore Wire, on achieving LEED® Platinum certification for their new Research and Development Center in McKinney, Texas. Encore Wire has proven their commitment to environmental sustainability by achieving this certification for energy use, lighting, water and material use as well as incorporating a variety of other sustainable strategies. The building was designed by PageSouthernlandPage and built by MYCON General Contractors.

“Encore Wire’s certification demonstrates tremendous green building leadership,” said Rick Fedrizzi, President, CEO & Founding Chair, U.S. Green Building Council. “The urgency of USGBC’s mission has challenged the industry to move faster and reach further than ever before, and Encore Wire serves as a prime example with just how much we can accomplish.”

Encore Wire received LEED Platinum certification based on a number of green design and construction features that positively impact the project itself and the broader community. These features include solar energy, solar water heating, recycled materials, rainwater harvesting, and environmentally friendly paints and coatings.

“We are very proud to have served as the general contractor for this project. To our knowledge, this is the first LEED Platinum Research & Development Center in North Texas. We look forward to continuing our relationship with Encore Wire on future projects.”

- Charles Myers, President & CEO of MYCON General Contractors
